

# EPM TOOL SELECTION

## CREATING COMPETITIVE ADVANTAGE

In order to get the maximum benefit from an EPM system **it is not enough to invest in producing a requirement specification** and then compare it to a list of the functionality available from the various vendors .

If you do **you will embed forever all the inefficient processes and procedures** which have developed within your organisation, underpinned by a mix of local tools.

We believe that as well as looking at your existing processes and procedures, **it is important to take an external view of best practices** in your sector and decide if you are as efficient as your competitors. If you are not you could take the opportunity to not only automate your existing processes but start on a targeted process improvement path. **This means you are not selecting an EPM system for today's business but for the more efficient business it needs to become,**

At ETS we have a long history of helping companies select EPM tools, plan and execute their implementation and provide support and training to them post implementation. We are tool independent but maintain close relationships with the major EPM software vendors and their customers. This enables us to maintain an detailed working knowledge of the EPM tools and the different configurations of their clients.

We can also help establish a company's current and target process maturity with reference to external best practices i.e PMBoK, Prince2, MSP, ISO.10006 etc. using our MAD (Maturity Assessment Database) and method supporting it.
